

Popular Indian Home Remedies Research

Additional remedies not already saved in the live database

Generated: 2026-06-24

Scope: This document excludes the five remedies already saved in the app database: Amla Juice, Ginger Honey Remedy, Neem Face Pack, Tulsi Ginger Tea, and Haldi Doodh. It lists additional remedies commonly used in Indian homes, with conservative usage notes and safety cautions.

Note: Home remedies can support comfort for mild symptoms, but they do not replace diagnosis or medical treatment. Escalate persistent fever, breathing difficulty, severe pain, dehydration, blood in stool/vomit, pregnancy-related symptoms, infant symptoms, or symptoms lasting more than a few days.

Remedies

Ajwain Water

Common use: Gas, bloating, heaviness after meals.

How used: Boil 1/2 tsp ajwain in 1 cup water for 3-5 minutes. Strain and sip warm after food.

Caution: Avoid frequent use in pregnancy unless a clinician approves. Use small amounts for acidity-prone users.

Jeera-Dhania-Saunf Water

Common use: Mild acidity, post-meal bloating, summer digestion support.

How used: Steep 1/2 tsp each cumin, coriander, and fennel seeds in hot water for 10 minutes; strain.

Caution: Avoid replacing meals or fluids. People on diuretics or with kidney disease should keep intake moderate.

Salt-Water Gargle

Common use: Sore throat comfort and throat irritation.

How used: Dissolve 1/4 to 1/2 tsp salt in a cup of warm water. Gargle and spit out 2-3 times daily.

Caution: Do not swallow repeatedly. Avoid for young children who cannot gargle safely.

Steam Inhalation

Common use: Nasal congestion and stuffy nose comfort.

How used: Use plain steam for 5-10 minutes, keeping the face away from hot water to prevent burns.

Caution: Avoid essential oils for infants, asthma-prone users, and anyone irritated by strong vapors.

Pudina Tea

Common use: Mild indigestion, gas, and cooling comfort.

How used: Steep fresh mint leaves in hot water for 5 minutes. Sip warm after meals.

Caution: Peppermint can worsen reflux in some people. Avoid concentrated peppermint oil without medical guidance.

Aloe Vera Gel

Common use: Minor skin dryness, mild sun exposure, and non-broken skin soothing.

How used: Apply a thin layer of clean aloe gel to intact skin. Patch test first.

Caution: Do not apply to deep wounds, severe burns, or infected skin. Stop if rash or

itching appears.

Triphala Night Drink

Common use: Occasional constipation support.

How used: Use a small dose of triphala powder in warm water at night, following product directions.

Caution: Avoid during pregnancy, diarrhea, dehydration, and with laxative overuse. Check interactions if on medication.

Methi Seed Water

Common use: Traditional metabolic and digestion support.

How used: Soak 1 tsp fenugreek seeds overnight in water. Drink the strained water in the morning.

Caution: May affect blood sugar. People on diabetes medicines, pregnant users, or surgery patients should ask a clinician.

Rice Kanji

Common use: Light food during mild stomach upset or low appetite.

How used: Cook rice with extra water until soft. Serve the starchy liquid with a pinch of salt if tolerated.

Caution: Seek care for dehydration, high fever, persistent vomiting, or diarrhea in children and older adults.

Coconut Oil Scalp Massage

Common use: Dry scalp and hair conditioning.

How used: Massage a small amount into scalp/hair, leave 30-60 minutes, then wash.

Caution: Avoid if it worsens dandruff, acne, or scalp itching. Patch test for sensitive skin.

Research Notes

- NCCIH notes that ginger has been studied for nausea and digestive symptoms, but evidence and product quality vary.
- NCCIH notes turmeric/curcumin research is active, but supplement dosing and interactions require caution.
- NCCIH notes peppermint oil may help some IBS symptoms, while peppermint can worsen reflux for some users.
- Cochrane's review on honey for acute cough in children is relevant to cough remedies, but honey must not be given to children under 1 year.
- Traditional Indian household use is not the same as proven clinical efficacy. The remedies above are framed as comfort/support practices for mild symptoms.
